

Washing hands with soap and clean water.

Topic 1.2 personal hygiene

This session focusses on personal hygiene for both boys and girls.

1.2.1 hand washing

Learning Outcomes

By the end of this lesson, the learners should be able to:

1. State the importance of hand washing with soap and running water at critical moments;
2. Demonstrate the steps for hand washing;
3. Explain the critical moments for hand washing.

Duration

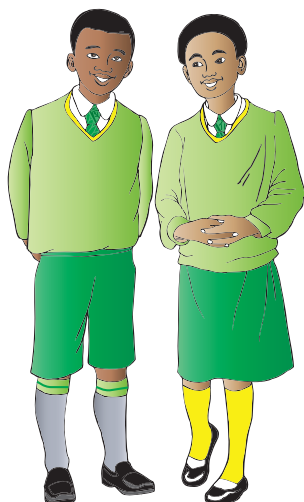

40 minutes

Learning Materials

- Poster showing a child washing his/her hands
- Poster showing hand washing pledge and 4 occasions of hand washing
- Flip chart or blackboard with the writing items
- Hand washing equipment (which can be either tippy taps or leaky tins or basins or jugs)
- Soap or any alternative cleansing agent.
- Ball, glitter and Petroleum Jelly (PJ)
- Hand washing song

Key Messages

- a. Washing hands with soap and clean water keeps one healthy
- b. Clean hands saves lives
- c. Most critical times for hand washing: after visiting the toilet and before eating

Well groomed pupils.

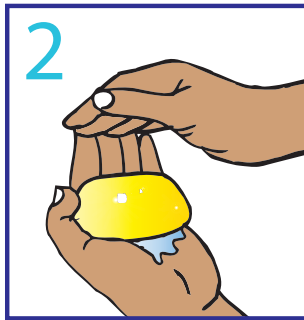

Unkempt pupils.

Learning Activities

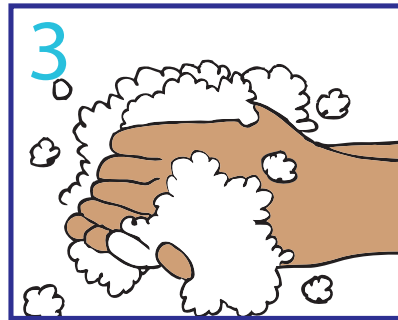

- STEP 1 Begin by introducing the topic and the learning objectives of the hand washing lesson.
- STEP 2 Refer the learners to the poster with a child washing his/her hands.
- STEP 3 Ask the learners to say why hand washing is important and explain the critical moments for hand washing. Once you have received all the answers underscore that hand washing helps to prevent hygiene-related diseases such as diarrhoea, respiratory infections.
- STEP 4 Next Demonstrate to the learners the glitter ball demo. This will help drive awareness of the importance of handwashing.
- STEP 5 Next, ask the learners to go outside and form a semi-circle around a functional hand washing facility with soap (if it is not available a jug with clean water can be used). Ask for volunteers among the learners who want to demonstrate the procedure for hand washing. Once many learners have demonstrated the procedure, highlight the following steps for hand washing (using the illustration overleaf):
 - a. Wet your hands with clean running water;
 - b. Apply soap or any other appropriate alternative to soap such as ash;
 - c. Rub your hands together for at least 10-15 seconds; thoroughly wash the wrists, palms, back of hands, between fingers and under the nail crevices;
 - d. Rinse hands with clean running water; and
 - e. Air dry hands to avoid recontamination by using shared towels.

Wet your hands with clean running water.

Apply soap or any other appropriate alternative to soap such as ash.

Rub your hands together for at least 10-15 seconds; thoroughly wash the wrists, palms, back of hands, between fingers and under the nail crevices.

Rinse hands with clean running water.

Air dry hands to avoid recontamination by using shared towels.

STEP 6 At the end of the lesson: , ask the learners to tell you what the critical times for washing the hands are. When you have received all the answers, conclude the session by identifying the following critical moments for hand washing:

- a. After using the toilet/ latrine;
- b. Before handling/preparing food;
- c. After changing a babies diaper/napkin or a used potty;
- d. Before eating; and
- e. Before feeding a baby.

STEP 7 Remind learners to show and tell their parents, guardians, friends and family of what they have learnt

STEP 8 Wrap up the session with a hand washing pledge and song.

1.2.2 Face Washing

Learning Outcome

By the end of the lesson, learners should be able to demonstrate and apply appropriate steps for washing the face.

Duration

40 minutes

Learning Materials

- Poster showing a child washing his/her face
- Flip chart or blackboard with the writing items
- A basin, clean water, face towel and soap

A boy washing his face with clean soap and water from pipe.

A girl washing her face with clean soap and water from basin.

Learning Activities

- STEP 1 Review the previous topic
- STEP 2 After the introduction, show learners the poster then ask them if they washed their faces today.
- STEP 3 After getting their response, ask them to give reasons as to why they think washing their face is an important practice. Next emphasize that washing the face can help to prevent eye diseases such as trachoma and improves grooming as a whole.
- STEP 4 Ask for a volunteer among the learners to list some of the materials that are needed for washing the face. They should be able to mention clean water, soap and a face towel/cloth.
- STEP 5 Ask all the learners to move outside the classroom and form a semi-circle around an existing water source or if there isn't one you may use a jug of water and a basin or a leaky tin or tippy tap.
- STEP 6 Call a few learners to come forward and demonstrate to others, how to wash the face properly.
- STEP 7 To wrap up the session, emphasize that the proper procedure for washing the face involves;
- washing your hands;
 - wetting your face;
 - applying soap all over your face and washing it well using a face towel/sponge or any locally available material;
 - rinsing off the soap with clean water;
 - drying your face with a clean, dry and soft towel (do not share towels).

Key messages

- a. Face washing prevents eye infections such as Trachoma
- b. Face washing makes one appealing and well groomed

Boy brushing teeth with toothpaste and clean water from tap.

Girl brushing teeth with toothpaste and clean water from bottle.

1.2.3 Oral Hygiene

Learning Outcome

By the end of this lesson, the learner should be able to explain the importance of brushing every day and demonstrate and apply proper methods of oral hygiene.

Duration

40 minutes

Learning Materials

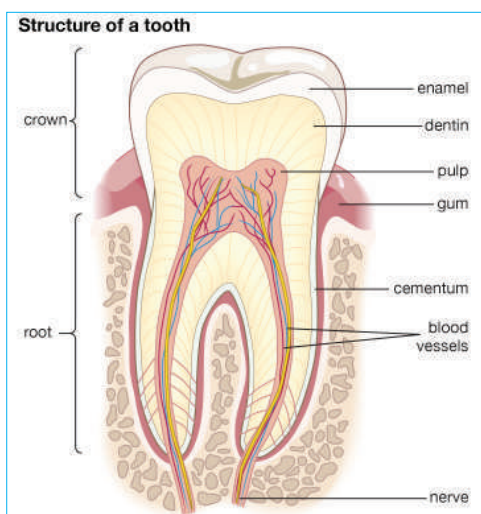

- Poster showing tooth structure and proper brushing technique with Toothbrushes (learners should bring along their own brushes); Note that this could be improvised according to context.
- Tooth paste
- Water.

Flow of communication:

1. About tooth and gums.
2. Why brushing (benefits of healthy teeth). If not, we need to tell them what happens when teeth are not brushed in simple language (germs). What causes cavities and gum disease and how Tooth Paste + Tooth Brush helps)
3. Right way of brushing and when to brush (toothbrush + Tooth paste). Why is Tooth Paste important (longer protection)
4. Experience brushing
5. Exercise + home assignment

Learning Activities

- STEP 1 Review the previous topic before introducing the objective of brushing teeth activity.
- STEP 2 Illustrate with tooth structure poster various important parts of teeth (crown, root and gums) and their role (very basic information). Then talk about the benefits of brushing teeth.
- STEP 3 Afterwards, probe on the benefits of brushing teeth. After you have received various answers, explain that brushing the teeth properly helps to:
- Prevent tooth decay, erosion and infections; (visualise benefit. Tooth decay by itself means nothing to kids. No tooth decay therefore no pain, more play and more study)

- Prevent gum diseases; and (do they know what gums are and why are they important. Need to explain its role)
 - Maintain fresh breath. (again visualise benefit for them. Fresh breath therefore, confidence to talk and make more friends, no social embarrassment)
- STEP 4 It is not only important to brush but also to brush the right way. Ask the learners when it is appropriate for people to brush their teeth. Once they have given all the answers, you should emphasize that people should brush their teeth after every meal or at least before going to sleep.
- STEP 5 Explain and demonstrate to learners the proper procedure for brushing the teeth. Stress the proper rhythm of brushing, the duration and the surfaces to be brushed including the teeth, gums and tongue.
- STEP 6 Go with the learners outside the classroom and have them demonstrate how brushing the teeth should be done using materials that they should have brought along with them to class.
- STEP 7 Wrap up the session with a song on how to brush teeth properly and a social pledge to do it every single day and tell this to their family members as well.
- A self-reporting chart as an exercise to be filled every day for at least 1 month

Key Messages

- a. Keeping the mouth clean prevents tooth decay and gum infections (visualize benefit for kids)
- b. Maintaining fresh breath makes one keep friends

1.2.4 General body hygiene (good personal grooming)

Learning Outcome

By the end of this session, learners should be able to demonstrate and practise appropriate body cleanliness.

Duration

40 minutes

Learning Materials

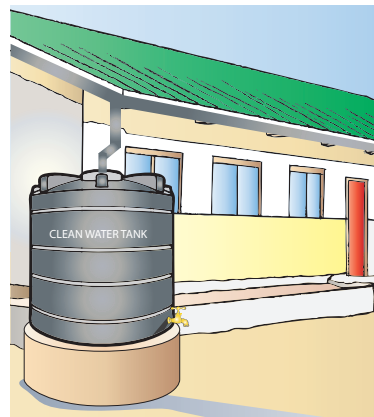

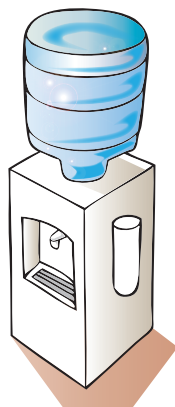

- Two posters one showing a neatly dressed pupil and another showing an unkempt pupil;
- Papers for the learners to write on (for the mind-map exercise);and
- A flip chart or blackboard with the writing items.

Learning Activities

- STEP 1 Begin by welcoming any newcomers, then review the previous topic before introducing the objective of this activity.
- STEP 2 Refer the learners to the two posters and ask them to describe what they see and note any differences between the two images. Let them write down what they see on the two posters. Afterwards collect their answers and share them with the rest of the class.
- STEP 3 Ask the learners why they think it is important to keep their bodies clean. After all the answers have been received, explain the importance of keeping the body clean to prevent water-washed diseases, vector infestation (e.g. jiggers, fleas and lice), body odour, to ensure that they are well-groomed and presentable, and improved skin perspiration.
- STEP 4 After emphasizing the importance of maintaining body hygiene ask learners about the different ways of doing this. Conclude this part of the session by underscoring the need to keep their nails short and clean and their hair clean; bathing regularly with soap and clean water; cleaning their noses and ears; covering the mouth when sneezing; avoiding spitting; anal cleaning after using the latrine; wearing clean clothes and sleeping on clean beddings.
- STEP 5 End the session with a song on personal hygiene (previously composed as a homework assignment).

Key message

Keeping the body clean prevents odour and keeps you healthy

Examples of safe water storage containers.

Topic 1.3 Water hygiene

Learning Outcomes

By the end of this session, learners should be able to:

- Identify the various uses of water.
- Mention the signs and symptoms of illnesses that are caused by drinking contaminated water.
- Commit to always drink safe water.

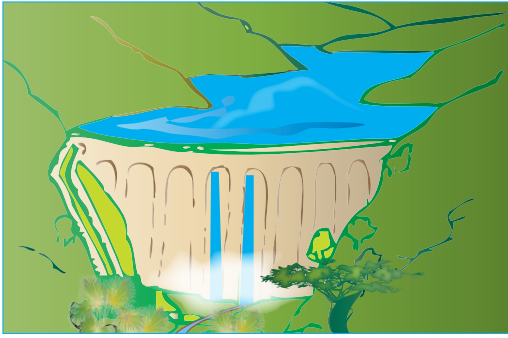

Duration

40 minutes

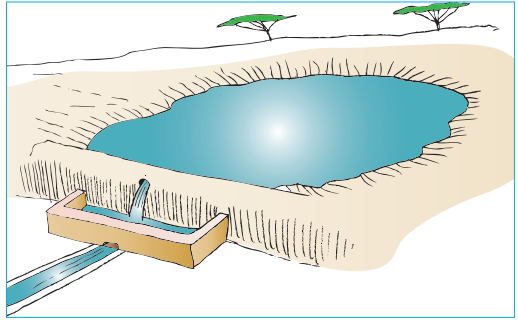

Learning Materials

- Posters of various improved and unimproved water sources
- Poster showing various methods of water treatment
- Flip chart or blackboard with the writing items
- Demonstration materials

Various sources of water

Dam.

Water pan.

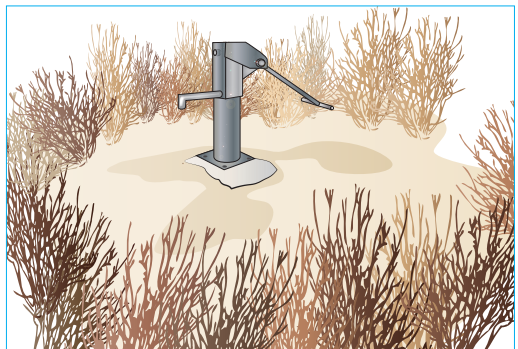

Rain water harvesting.

River.

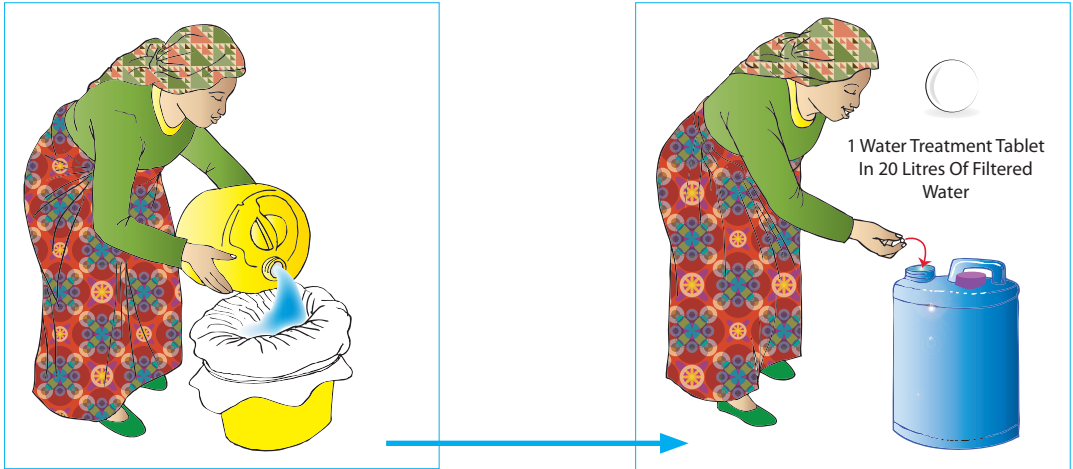

Ground water storage tank.

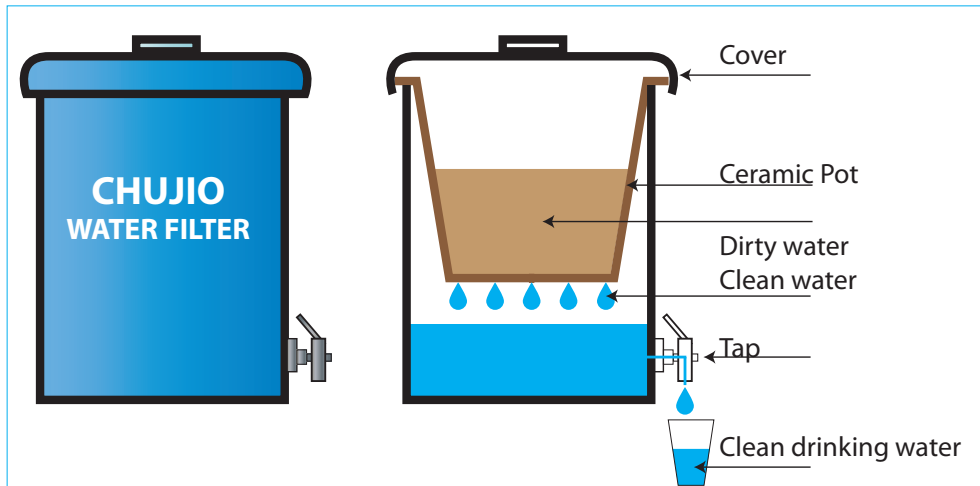

Protected bore hole.

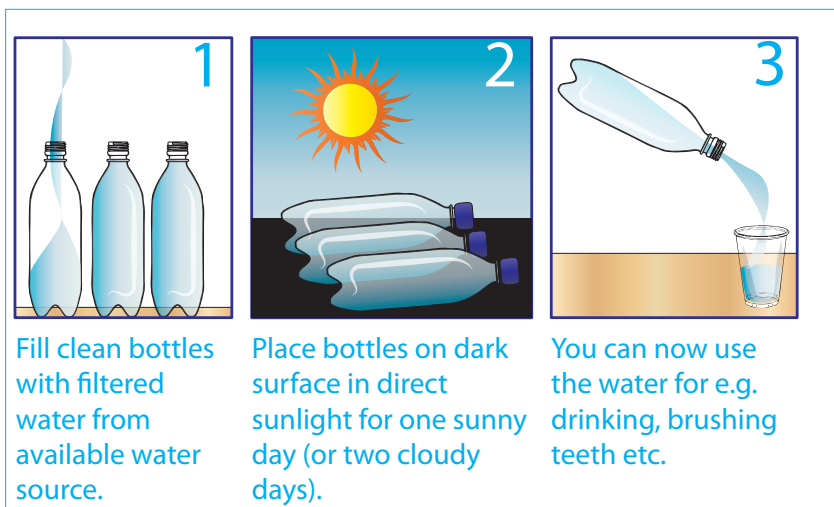

Various methods of making water safe to drink.

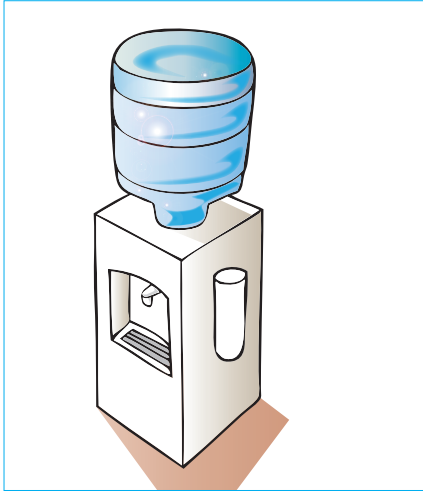

Filter water using clean cotton cloth and then use water purifying tablets.

Chujio water filter.

Solar Water Disinfection (SODIS).

Commercially purified water.

Boiling water.

Learning Activities

- STEP 1 Begin by welcoming any new learners, then review the previous topic before introducing the objective of the water hygiene activity.
- STEP 2 Ask the learners to mention the various uses and sources of water, categorizing each source as either improved or unimproved. Once you have received their answers you can add to their list other sources and uses such as domestic use (drinking, cooking and cleaning) and for recreational purposes (swimming).
- STEP 3 Ask learners why we should only drink water from safe sources and if not what measures can be taken to make the water safe. Once you have received the various answers use the accompanying poster to explain the measures such as filtration, boiling and chlorination. You can also demonstrate some of the methods during the session.
- STEP 4 Take an environmental walk to the existing water sources in the school or community. Back in class, let them explain whether these sources are safe or unsafe.
- STEP 5 Finally, end the session with a song on the importance of water hygiene.

Key messages

- a. Always drink safe water
- b. Always treat water from unimproved sources
- c. Ensure proper storage of drinking water
- d. Always conserve water
